Preface

The *Weekly Coal Production (WCP)* provides weekly production estimates of U.S. coal by State, as well as supplementary data which are usually published twice a month. This week's Coal Exports and Imports Supplement contains annual as well as detailed monthly data on U.S. coal and coke exports and imports. Another supplement contains detailed monthly data covering electric utility coal consumption, stocks, and receipts (quantity and price).

Preliminary actual data are published quarterly based on the EIA-6 coal distribution data. The estimation error for a quarter at the national level ranges from one percent to four percent. The State level errors can vary slightly from the national level.

Final data are published annually based on the EIA-7A Coal Production Survey. The revision error for a quarter at the national level ranges from .02 percent to .08

percent. The State level errors can vary slightly from the national level.

This publication is prepared by the Coal Division; Office of Coal, Nuclear, Electric and Alternate Fuels; Energy Information Administration (EIA) to fulfill its data collection and dissemination responsibilities as specified in the Federal Energy Administration Act of 1974 (P.L. 93-275) as amended. *Weekly Coal Production* is intended for use by industry, press, State and local governments, and consumers. Other publications that may be of interest are the quarterly *Coal Distribution Report*, the *Quarterly Coal Report*, *Coal Production 1988*, and *Coal Data: A Reference*.

This publication was prepared by Wayne M. Watson under the direction of Mary K. Paull and Noel C. Balthasar, Chief, Data Systems Branch. *Questions on energy statistics should be directed to the National Energy Information Center (NEIC) at (202/586-8800).*

Summary

U.S. coal production in the week ended February 17, 1990, as estimated by the Energy Information Administration, totaled 20 million short tons. This was 3 percent less than in the previous week but 5 percent higher than in the comparable week of 1989. Production East of the Mississippi totaled 13 million short tons, and production West of the Mississippi River totaled 8 million short tons.

On February 20, 1990, the United Mine Workers of America announced that striking miners had ratified a new 4-year contract with the Pittston Coal Group. The new contract guarantees workers nearly 100 percent free health care coverage, gives miners expanded rights to future jobs in the company's non-union mining subsidiaries, and requires Pittston to continue to pay, at a reduced rate, into two existing, industrywide health and pension benefit funds. Under the new contract, Pittston received flexibility in scheduling production operations, which the company said it needed to meet the demands of international coal buyers and to boost its productivity.

1989 Coal Exports and Imports

U.S. coal exports in December 1989 totaled 8 million short tons, slightly less than in December 1988. This raised the level of U.S. coal exports in 1989 to 101 million short tons from 95 million short tons in 1988. The 1989 coal exports ranked as the Nation's third highest year, following an all-time high of 113 million short tons in 1981 and 106 million short tons in 1982.

Most of the increase in U.S. coal exports in 1989 reflects a 14-percent growth in shipments to European customers. Factors contributing to this rise include: a decline in coal exports from Australia and Poland due to the implementation of new work agreements, which affected productivity in both countries; a shortfall in coal exports from China and the U.S.S.R.; and a rise in the demand for metallurgical coal to meet an increase in world steel production.

The United States continued to be of worldwide importance as a source of coal in 1989, ranking second to Australia in the amount exported. U.S. coal was shipped to more than 30 countries during the year. Principal among these were Canada, Japan, and Italy.

Together, these three countries, each longstanding markets for U.S. coal, accounted for 42 percent of the coal exported from the United States in 1989.

Metallurgical coal exports, the mainstay of U.S. coal exports, rose to 65 million short tons in 1989 from 62 million short tons in 1988. The largest shipments were to Japan, Canada, Italy, Belgium and Luxembourg, and Brazil. Combined, the tonnage shipped to these five countries represented 56 percent of the 1989 U.S. metallurgical coal exports.

Steam coal exports also rose in 1989, increasing to 36 million short tons from 33 million short tons in 1988. Canada, by far the major destination, received 10 million short tons. However, this was 17 percent less than in 1988. The drop occurred largely because in 1989 the Canadian electric power industry relied more on nuclear power plants than in the past. European markets imported 17 million short tons of U.S. steam coal, 25 percent more than in 1988. Almost two thirds of this went to Italy, Denmark, and the Netherlands. Shipments to France rose sharply to nearly 2 million short tons in 1989 from 24,000 short tons in the previous year. This reflects an increase in electricity generation from the country's coal-fired plants in 1989, in order to compensate for a loss in output at hydroelectric plants due to a drought, and a shutdown of nuclear power plants for safety inspections.

Norfolk, Virginia, continued as the Nation's leading coal-exporting district in 1989, shipping almost half of the total. Ranking second was Cleveland, Ohio, 16 million short tons. Other important coal-export districts were New Orleans, Louisiana, Mobile, Alabama, and Baltimore Maryland.

U.S. coal imports in Dec
thousand short tons. Thi

nearly 3 million short tons, compared with slightly over 2 million short tons in 1988. In 1989, coal was imported chiefly from Colombia (47 percent) and Canada (35 percent). In general, coal was imported from Canada to meet the needs of consumers not readily

supplied by domestic sources, whereas coal from other countries was imported largely by power plants in the Southeast. The 1989 U.S. coal imports were valued at approximately \$97 million, based on an average price of \$34.14 per short ton.

¹ Includes countries with exports less than or equal to 50,000 short tons in 1988.

² Average price of all coal exports in this category.

Note. Total may not equal sum of components because of independent rounding. U.S. Coal imports include Puerto Rico. Average price is based on the free alongside ship (f.a.s.) value. The average prices presented in this table are considered to be representative prices for coal exports and fall within the range of \$28 to \$47 inclusively.

Coal Highlight

U.S. Coal Exports and Imports, 1980-1989

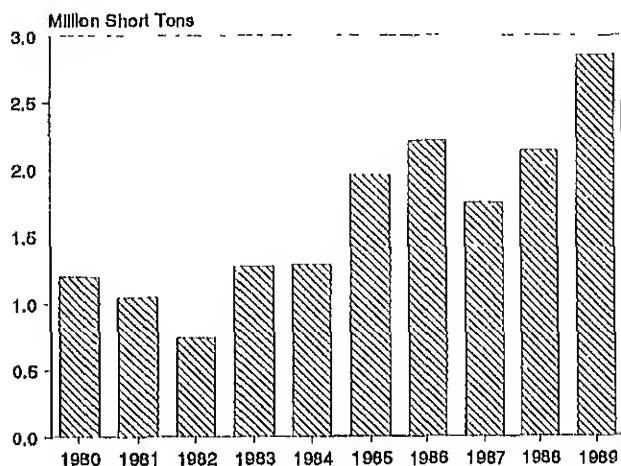

Metallurgical and Steam Coal Exports

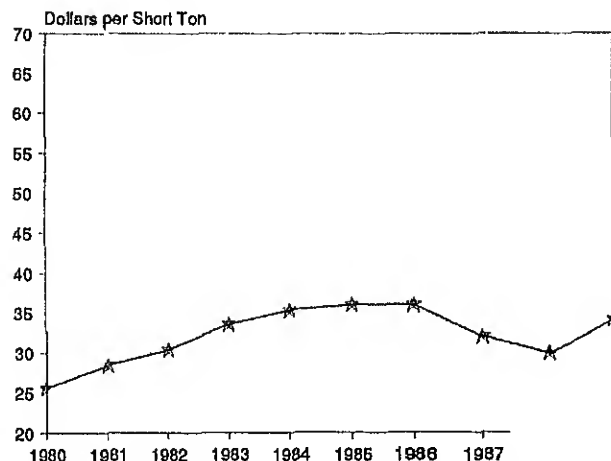

Average Price of Coal Exports

Coal Imports

Average Price of Coal Imports

Sources: U.S. Department of Commerce, Bureau of the Census, "Monthly Report EM 522" and "Monthly Report IM 145."

During the decade of the 1980's, U.S. coal exports ranged from a low of 78 million short tons in 1983 to a high of 113 million short tons in 1981 and totaled 101 million short tons in 1989. Valued at \$3 to \$6 billion annually, they made a significant contribution to the Nation's balance of trade. On the average, annual coal exports represented about 10 percent of annual production. Metallurgical coal, long the mainstay of U.S. coal exports, accounted for about 60

percent of the total coal exported. Norfo was the principal export terminal, handling of the tonnage shipped annually. Although was delivered to more than 30 countries destinations were Japan, Canada, and Ita

By contrast, U.S. coal imports in the relatively small, averaging less than 2 n tons per year.

* 50,000 short tons.

†s may not equal sum of components due to independent rounding.

U.S. Department of Commerce, Bureau of the Census, "Monthly Report EM 522."

A Norwegian collier is loaded at Davant, Louisiana, with 88,000 short tons of coal bound for Japan. Too large for the Panama Canal, the vessel reached Japan by rounding Africa's Cape of Good Hope.

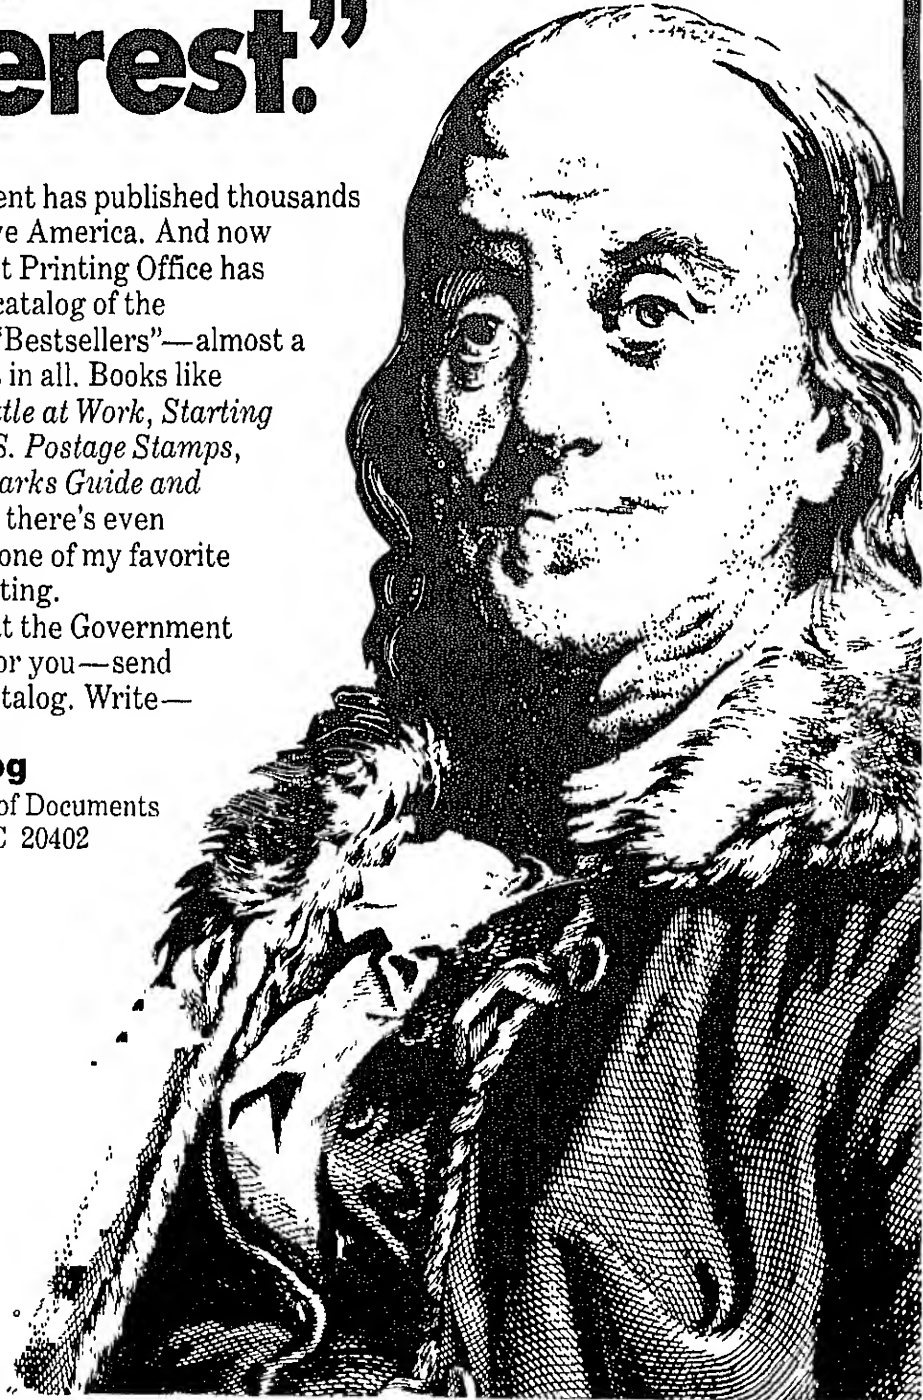

“An investment in knowledge pays the best interest.”

Your Government has published thousands of books to serve America. And now the Government Printing Office has put together a catalog of the Government's “Bestsellers”—almost a thousand books in all. Books like *The Space Shuttle at Work*, *Starting a Business*, *U.S. Postage Stamps*, and *National Parks Guide and Map*. I daresay there's even information on one of my favorite subjects—printing.

Find out what the Government has published for you—send for your free catalog. Write—
